Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-27 are rejected under 35 U.S.C. 102(e) as being unpatentable by Levine et al (U.S. 5,835,702).

As per claims 1,9,17,25 a performance counter framework for rendering performance counter data in a system including a performance counter provider application and a performance counter consumer application, the performance counter framework comprising: an application program interface comprising a set of functions including: a counter registration function called by the performance counter provider application to register a performance counter structure within an address space of the counter provider application (col. 2, lines 51-64), wherein the counter registration function registers an access function for retrieving performance counter data from the performance counter structure; and a counter query function called by the performance counter consumer application to retrieve counter data from the performance counter structure within the address space of the counter provider application by invoking the access function (col. 9, lines 32-55).

Art Unit: 2145

3. As per claims 2,10,18 Levine disclosed wherein the access function operates within the address space of the counter provider application to retrieve the performance counter data from the performance counter structure (col. 9, lines 17-25).
4. As per claims 3,11,19 Levine disclosed wherein the access function is a callback function (col. 10, lines 7-16).
5. As per claims 4,12,20 Levine disclosed wherein the registration function further supports specifying a data template describing the performance counter data (col. 9, lines 17-25).
6. As per claims 5,13,21 Levine disclosed wherein the application program interface includes a method for installing a description of the performance data furnished by a provider associated with the performance counter provider application (col. 2, lines 51-64).
7. As per claims 6,14,22 Levine disclosed wherein the description of the performance data includes a performance counter data schema (col. 7, lines 35-47).
8. As per claims 7,15,23 Levine disclosed wherein the application program interface includes a method for requesting a block of data items to be created according to a specified dataset template (col. 9, lines 17-25).

Art Unit: 2145

9. As per claims 8,16,24 Levine disclosed wherein the application program interface includes a method for providing a list. of registered datasets (col. 4, lines 24-36).

10. As per claims 26 Levine disclosed performance counter provider application for use in a performance counter system embodying a performance counter provider/consumer model, the performance counter provider comprising executable instructions for: requesting, via an application program interface, an operating system to allocate a memory space within the provider application for a performance counter data structure (col. 6, lines 21-31); storing performance counter information within the memory space; and providing access by a registered callback function (col. 4, lines 64-67 & col. 5, lines 1-9), invoked by a call to the application program interface, to the memory space containing the performance counter data structure (col. 9, lines 17-25).

11. As per claim 27 Levine disclosed a performance counter system comprising: a performance counter provider; a performance counter consumer; and an operating system performance counter application program interface comprising a first set of functions callable by a performance counter provider application to register the performance counter provider in a repository (col. 9, lines 43-55), and a second set of functions for serving requests originating from the performance counter consumer to enumerate and access the performance counter provider (col. 2, lines 51-64).
